The **PVS-14 Night Vision Monocular** is the current military issue night vision goggle for the US armed forces. It is also the preferred choice of many foreign (NATO) forces. Produced by the hundreds of thousands, the 14 will continue to march on for many years to come. The NVD-PVS-14 is a versatile, high performance system designed to assist viewing during night-time operations, while being hand-held, helmet or weapon mounted. The user can retain their night-adapted vision in one eye while viewing their surroundings through the illuminated eyepiece.

Another strength is its ability to be weapon mounted behind most collimated daylight aimers and Reflex sights such as the ACOG, Aimpoint and EO Tech systems. This allows the user the ability to use their PVS-14 both as a night vision monocular for increased mobility and tactical awareness and as a short range weapon sight.

With our expansive capabilities and strategic partnerships, we are able to custom build any of our NVD manufactured products with Image Intensifiers from these manufacturers: Harris Corporation®, L3 Insight Technologies®, and Photonis®. This includes green and white phosphor and thin or un-filmed image tubes.

This system complies with MIL-PRF-49324(CR), MIL-PRF-49427(CR) and MIL-STD-810G.
