

CNVD-T THERMAL WEAPON SIGHT

The **NVD-CNVD-T (Clip on Night Vision Device - Thermal)** is a thermal weapon sight which is capable of detecting a man sized target at 600 meters. The NVD-CNVD-T incorporates a reticle which allows it to be used as a stand alone weapon sight, and it has the unique capability of being mounted on a weapon in front of a day sight or holographic weapon sight while still maintaining the days optics zero settings.

The thermal imaging capability of the NVD-CNVD-T allows for observation and target identification under adverse conditions including light rain, smoke, light snow, and low light to total darkness. With its impact resistant polymer housing, the NVD-CNVD-T system weighs only 21 oz with batteries.
