The IR Hunter™ Weapon Sight has been designed by a team that has been delivering great thermal sights industry-wide for 20 years. The IR Hunter™ contains all the features and ergonomics you have wanted and combined them into a sleek system made to fit securely onto your rifle. The IR Hunter's Turret Knob controls are located where you would expect them to be; they are modeled after your day optics. Other thermal systems' controls take time to learn; but in the dark, downrange, or under fire, your natural instincts will appreciate the IR Hunter's similarity to your day sight. The IR Hunter™ uses precision sighting reticles, which scale as you zoom; just as a first focal plane reticle does on a high end rifle scope. This system features an image capture and review capability. Available in 19mm or 35mm lenses.
